

As a High precision GPS user, I am opposed to LightSquareds plan. Testing has shown that there is still an interference issue. GPS technology should not be allowed to be degraded by any technology, in any amount. The GPS community is not asking for preferential treatment, just the same treatment GPS was given prior to the wavier granted to LightSquared. Deny LightSquared's latest requests, rescind the wavier and ensure one of the Nation's greatest assets will continue to provide its valuable service.

Respectfully,

Steven D. Telford
